                            INTERNET NUMBERS

Status of this Memo

   This memo is an official status report on the network numbers and the
   autonomous system numbers used in the Internet community.
   Distribution of this memo is unlimited.

Introduction

   This Network Working Group Request for Comments documents the
   currently assigned network numbers and gateway autonomous systems.
   This RFC will be updated periodically, and in any case current
   information can be obtained from Hostmaster at the DDN Network
   Information Center (NIC).

         Hostmaster
         DDN Network Information Center
         SRI International
         333 Ravenswood Avenue
         Menlo Park, California 94025

   Phone: 1-800-235-3155

         Network mail: HOSTMASTER@NIC.DDN.MIL

   Most of the protocols used in the Internet are documented in the RFC
   series of notes. Some of the items listed are undocumented. Further
   information on protocols can be found in the memo "Official Internet
   Protocols" [40]. The more prominent and more generally used are
   documented in the "DDN Protocol Handbook" [17] prepared by the NIC.
   Other collections of older or obsolete protocols are contained in the
   "Internet Protocol Transition Workbook" [18], or in the "ARPANET
   Protocol Transition Handbook" [19]. For further information on
   ordering the complete 1985 DDN Protocol Handbook, contact the
   Hostmaster. Also, the Internet Activities Board (IAB) publishes the
   "IAB Official Protocol Standards" [52], which describes the state of
   standardization of protocols used in the Internet. This document is
   issued quarterly. Current copies may be obtained from the DDN
   Network Information Center.

The lists below contain the name and network mailbox of the
individuals responsible for each registered network or autonomous
system. The bracketed entry, e.g., [nn,iii], at the right hand
margin of the page indicates a reference for the listed network or
autonomous system, where the number ("nn") cites the document and the
letters ("iii") cite the NIC Handle of the responsible person. The
NIC Handle is a unique identifier that is used in the NIC
WHOIS/NICNAME service. People occasionally change electronic
mailboxes. To find out the current network mailbox or phone number
for an individual, or to get information about a registered network,
use the NIC WHOIS/NICNAME service or contact HOSTMASTER@NIC.DDN.MIL.

The convention used for the documentation of Internet Protocols is to
express numbers in decimal and to picture data in "big-endian" order
[39]. That is, fields are described left to right, with the most
significant octet on the left and the least significant octet on the
right.

The order of transmission of the header and data described in this
document is resolved to the octet level. Whenever a diagram shows a
group of octets, the order of transmission of those octets is the
normal order in which they are read in English. For example, in the
following diagram the octets are transmitted in the order they are
numbered.

```
    0                   1                   2                   3
    0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1
   +-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
   |       1       |       2       |       3       |       4       |
   +-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
   |       5       |       6       |       7       |       8       |
   +-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
   |       9       |      10       |      11       |      12       |
   +-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
```
                      Transmission Order of Bytes

Whenever an octet represents a numeric quantity the left most bit in
the diagram is the high order or most significant bit. That is, the
bit labeled 0 is the most significant bit. For example, the
following diagram represents the value 170 (decimal).

```
                        0 1 2 3 4 5 6 7
                       +-+-+-+-+-+-+-+-+
                       |1 0 1 0 1 0 1 0|
                       +-+-+-+-+-+-+-+-+
```
                        Significance of Bits

   Similarly, whenever a multi-octet field represents a numeric quantity
   the left most bit of the whole field is the most significant bit.
   When a multi-octet quantity is transmitted the most significant octet
   is transmitted first.

                        NETWORK NUMBERS

   The network numbers listed here are used as internet addresses by the
   Internet Protocol (IP) [14,26]. The IP uses a 32-bit address field
   and divides that address into a network part and a "rest" or local
   address part. The division takes 4 forms or classes.

      The first type of address, or class A, has a 7-bit network number
      and a 24-bit local address. The highest-order bit is set to 0.
      This allows 128 class A networks.

```
                        1                   2                   3
    0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1
   +-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
   |0|   NETWORK   |                Local Address                  |
   +-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
```
                          Class A Address

      The second type of address, class B, has a 14-bit network number
      and a 16-bit local address. The two highest-order bits are set to
      1-0. This allows 16,384 class B networks.

```
                        1                   2                   3
    0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1
   +-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
   |1 0|          NETWORK         |           Local Address        |
   +-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
```
                          Class B Address

      The third type of address, class C, has a 21-bit network number
      and a 8-bit local address. The three highest-order bits are set
      to 1-1-0. This allows 2,097,152 class C networks.

```
                        1                   2                   3
    0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1
   +-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
   |1 1 0|                   NETWORK                 | Local Address |
   +-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
```
                          Class C Address

The fourth type of address, class D, is used as a multicast
address [13]. The four highest-order bits are set to 1-1-1-0.

```
                      1                   2                   3
  0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1
 +-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
 |1 1 1 0|                 multicast address                     |
 +-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+-+
```
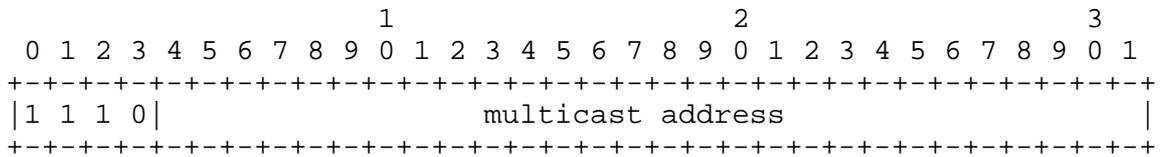

Class D Address

Note: No addresses are allowed with the four highest-order bits
set to 1-1-1-1. These addresses, called "class E", are reserved.

One commonly used notation for internet host addresses divides the
32-bit address into four 8-bit fields and specifies the value of each
field as a decimal number with the fields separated by periods. This
is called the "dotted decimal" notation. For example, the internet
address of VENERA.ISI.EDU in dotted decimal is 010.001.000.052, or
10.1.0.52.

The dotted decimal notation will be used in the listing of assigned
network numbers. The class A networks will have nnn.rrr.rrr.rrr, the
class B networks will have nnn.nnn.rrr.rrr, and the class C networks
will have nnn.nnn.nnn.rrr, where nnn represents part or all of a
network number and rrr represents part or all of a local address.

There are four catagories of users of Internet Addresses: Research,
Defense, Government (Non-Defense), and Commercial. To reflect the
allocation of network identifiers among the categories, a one-
character code is placed to the left of the network number: R for
Research, D for Defense, G for Government, and C for Commercial (see
Appendix A for further details on this division of the network
identification).

Network numbers are assigned for networks that are connected to the
research Internet and operational Internet, and for independent
networks that use the IP family protocols (these are usually
commercial). These independent networks are marked with an asterisk
preceding the number.

The administrators of independent networks must apply separately for
permission to interconnect their network with the Internet.
Independent networks should not be listed in the working tables of
the Internet hosts or gateways.

For various reasons, the assigned numbers of networks are sometimes
changed. To ease the transition the old number will be listed for a
transition period as well. These "old number" entries will be marked
with a "T" following the number and preceding the name, and the
network name will be suffixed "-TEMP".

Special Addresses:

   In certain contexts, it is useful to have fixed addresses with
   functional significance rather than as identifiers of specific
   hosts.

      The address zero is to be interpreted as meaning "this", as in
      "this network".

         For example, the address 0.0.0.37 could be interpreted as
         meaning host 37 on this network.

      The address of all ones are to be interpreted as meaning "all",
      as in "all hosts".

         For example, the address 128.9.255.255 could be interpreted
         as meaning all hosts on the network 128.9.

      The class A network number 127 is assigned the "loopback"
      function, that is, a datagram sent by a higher level protocol
      to a network 127 address should loop back inside the host. No
      datagram "sent" to a network 127 address should ever appear on
      any network anywhere.

Class A Networks

AUTONOMOUS SYSTEM NUMBERS

   The Exterior Gateway Protocol (EGP) [41,43] specifies that groups of
   gateways may form autonomous systems. The EGP provides a 16-bit
   field for identifying such systems. The values of this field are
   registered here.

   Autonomous System Numbers:

   Number   System Name   Contact
   ------   -------------------------------   -------

      1   The BBN Core Gateways   [MB]
      2   DCN-AS   [DLM1]

APPENDIX A

The network numbers in class A, B, and C network addresses are
allocated among Research, Defense, Government (Non-Defense) and
Commercial uses.

  Class A (highest-order bit 0)

        Research allocation: 8
        Defense allocation: 24
        Government allocation: 24
        Commercial allocation: 94
        Reserved Addresses: (0, 127)   2
        Total   128

  Class B (highest-order bits 1-0)

        Research allocation: 1024
        Defense allocation: 3072
        Government allocation: 3072
        Commercial allocation: 12286
        Reserved Addresses: (0, 16383)   2
        Total   16384

  Class C (highest-order bits 1-1-0)

        Research allocation: 65536
        Defense allocation: 458725
        Government allocation: 458725
        Commercial allocation: 1572862
        Reserved Addresses: (0, 2097151)   2
        Total   2097152

  Class D (highest-order bits 1-1-1-0)

All addresses in this class are allocated for multicast use.

  Class E (highest-order bits 1-1-1-1)

All addresses in this class are reserved for future use.

Experimental networks which later become operational need not be
renumbered. Rather, the identifiers could be moved from Research to
Defense, Government or Commercial status. Thus, network identifiers
may change state among Research, Defense, Government and Commercial,
but the number of identifiers allocated to each use must remain
within the limits indicated above. To make possible this fluid
assignment, the network identifier spaces are not allocated by simple

partition, but rather by specific assignment.

Also, organizations not currently affiliated with the Internet may be assigned numbers for networks for non-connected service. If at some later time such networks are connected to the Internet (with appropriate prermissions and approvals) the networks need not be renumbered.
